REAL TIME COMMUNICATION SYSTEM POWERED BY AI FOR SPECIALLY ABLED

Should act as a bridge between disabled people and the other people ,which should help them to communicate with each other.

The system must be user friendly, that it must be simpler in a way anyone can use it with ease, make sure it helps the people with disablity communicate at ease.

SAYS

DOES

THINKS

FEELS

Operate the device with ease also get good user experience,real time operation without any interference

Good UX and UI ,easy to locate anything, good voive recognition and hand gesture recognition with proper translation

GAIN

- Makes it easy for the differently abled to communicate with others
- Help them stay connected with others
- Helps them move around
- Help them to live independently

PAIN

- Sometimes quite expensive
- Inaccuracies are still possible
- Needs human surveilance
- Maybe susceptible to security risks
